

eHouse Popup Wireframe

v2020.2

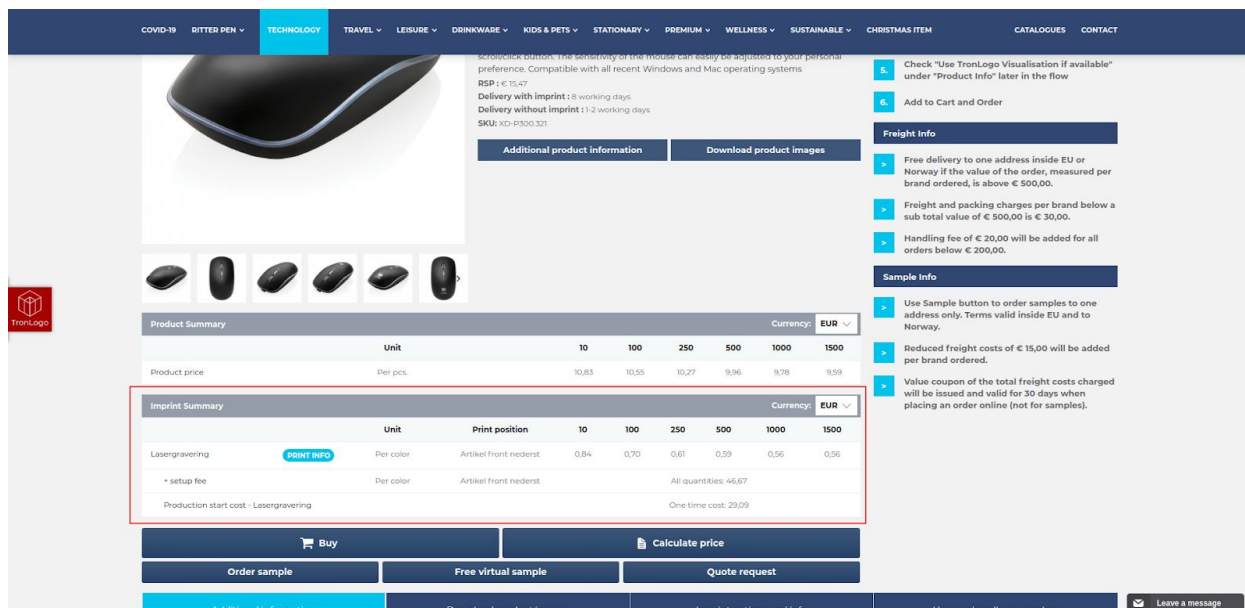

Principle

The principle of the popup is to take off all calculations from the Magento side, and move them over to the eHouse API side.

Main Idea

Imprint prices are shown from the eHouse API (pulled in dynamically) instead of storing them into the Magento store:

The screenshot shows a product page for a mouse. The imprint summary table is highlighted in red and contains the following data:

Imprint Summary		Unit	Print position	10	100	250	500	1000	1500
Lasergrievring	Per color	Artikel front nederst	0,84	0,70	0,61	0,59	0,56	0,56	0,56
+ setup fee	Per color	Artikel front nederst	All quantities: 46,67						
Production start cost - Lasergrievring				One time cost: 29,09					

If, after selecting quantity, we choose to continue to set up an imprint, it would open a new window across the screen, similar to Penhouse Ritter penbuilder:

Production start cost - Lasergraving One time cost: 29,09

In this window, you'd be able to select the desired imprint methods for the product or products (if multiple color, size is chosen), and see the final price.

Once this is closed, you can see the overview of what is chosen, and also the final cost, and the ability to add this to the cart:

The screenshot shows a product configuration page for a wireless mouse. The main content area asks "Do you want to add an imprint to this product?" with a "Yes, I do" button and an "Add to cart" button. Below this, there are options for "Imprint option" (Lasergraving / Artistket front nederst), "Max size of imprint area" (15x20 (mm)), and "Max colors to print" (1). A "PRINT INFO" button is also visible. A sidebar on the right shows a "Calculation overview" table:

Product	Per pcs.	Qty.	Total
Light up logo	€ 10,55	100	€ 1.055,00
wireless mouse			
PRICE PER ITEM: € 10,55			
TOTAL PRICE: € 1.055,00			

Below the table, there are buttons for "Reset my choice" and "Add to cart". At the bottom, there is an "Additional Information" section with the following details:

Additional Information	
Delivery with imprint	8 working days
Delivery without imprint	1-2 working days
Weight per unit (gram)	96
Weight export carton (kilo)	7

On cart, checkout and order summary / order email / order view, the orders would look the same as now, with all the imprint data specified.

By doing this, this would take all the imprint load off of the Magento site, and allow us to fix bugs / add new features consistently in one place.

The popup would have modifiable colors, texts, logos, etc. The imprint methods would be the same that are available in your shop currently.
